Mindtickle — Security and Automation Engineer

Dear Hiring Team,

I am applying for the Security and Automation Engineer role at Mindtickle. I build the automation that lets a security team move faster, and that is the work this role describes.

At FICO I led the migration of our SOAR operations from Cortex XSOAR to Torq, rebuilding production playbooks with minimal disruption, and developed reusable Python modules and REST API integrations across Splunk, Microsoft Defender, Wiz, Datadog, Jira and Abnormal Security. I also built an AI-assisted phishing investigation workflow that closes 75% of phishing alerts automatically.

I am based in Bengaluru, open to in-office, hybrid or remote work and to relocation, and can join after a 60-day notice period. I would welcome the chance to talk through how I can contribute.

Sincerely,
Aditya Sapra
