SUMMARY

Cybersecurity Engineer at FICO specialising in security automation. Builds SOAR workflows and Python integrations across Splunk, Microsoft Defender, Wiz, Datadog and Jira, led the migration from Cortex XSOAR to Torq, and delivered AI-assisted investigation workflows on Amazon Bedrock. Achieved 75% automated phishing alert closure and an 80% MTTR reduction on cloud alerts.

SKILLS

SOAR Engineering, Security Orchestration, Workflow Automation, Torq, Cortex XSOAR, Python, REST APIs, GraphQL, Bitbucket, Jira, AI-Powered Investigation Platforms, LLM-Based Alert Analysis, Amazon Bedrock, RAG Architectures, Amazon OpenSearch Serverless, Threat Detection & Hunting, Incident Response, Alert Triage, MITRE ATT&CK, Sigma, SPL, KQL, YARA, Splunk, Microsoft Defender, Cloud Security, Cloud Alert Enrichment, AWS, Wiz, Datadog, VirusTotal, Abnormal Security

EXPERIENCE

Cybersecurity Engineer 1 — Detection Engineering & AI Security — FICO (Jan 2026–Present)

- Architected an enterprise Detection-as-Code framework using Torq and Bitbucket, standardizing version control, testing, deployment, and rollback for Sigma, SPL, KQL, YARA, and YAML detections, cutting emergency deployment effort by 50%.
- Built an AI-powered cloud security investigation platform integrating Wiz, Python, GraphQL, AWS Bedrock, and Amazon OpenSearch Serverless (RAG) for automated alert enrichment and LLM-based incident summarization, reducing MTTR by 80% and enabling 80% automated closure of low-complexity cloud alerts.
- Engineered an end-to-end automated threat hunting pipeline that enriches observables with threat intelligence, validates IOCs, and ingests prioritized findings into Splunk, reducing manual analyst effort by 60%.

Cybersecurity Engineer Associate — FICO (Jul 2024–Dec 2025)

- Led migration of enterprise SOAR operations from Cortex XSOAR (Demisto) to Torq, rebuilding production playbooks and integrations with minimal disruption to business-critical incident response workflows.
- Developed reusable Python modules and REST API integrations connecting Splunk, Microsoft Defender, Wiz, Datadog, Jira, and Abnormal Security into centralized SOAR workflows, accelerating future automation development.
- Designed and deployed a production-grade, AI-assisted phishing investigation workflow in Torq combining IOC extraction, VirusTotal and Abnormal Security enrichment, and Amazon Bedrock-based assessment, achieving 75% automated phishing alert closure.

Cybersecurity Intern — FICO (May 2023–Jul 2024)

- Built Python utilities and API integrations for alert enrichment, email parsing, IOC extraction, and automated ticket creation within SOAR playbooks.

- Assisted in developing and tuning detection rules, validating security use cases, and documenting incident response runbooks across Splunk, Microsoft Defender, and Abnormal Security.

PROJECTS

Automated Phishing Investigation Platform

Technologies: Torq, Amazon Bedrock, VirusTotal, Abnormal Security

- Automated header parsing, IOC extraction, reputation checks, and AI-assisted phishing verdicts with integrated risk scoring.
- Closed 75% of phishing alerts automatically, slashing manual analyst workload.

Detection-as-Code Framework

Technologies: Torq, Bitbucket, Sigma, SPL, KQL, YARA, YAML

- Automated the full detection lifecycle — authoring, testing, deployment, and rollback — across Sigma, SPL, KQL, YARA, and YAML via CI/CD-style pipelines.
- Cut emergency deployment effort 50% and raised release governance across every detection platform.

Wiz AI Alert Analyzer — AI-Powered Cloud Investigation Platform

Technologies: Python, GraphQL, AWS Bedrock, Amazon OpenSearch Serverless (RAG), Wiz

- Built a RAG-based AI investigation engine over Wiz cloud findings, automating alert enrichment and LLM-generated incident summaries.
- Cut MTTR 80% and auto-resolved 80% of low-complexity alerts, freeing analyst capacity for high-severity threats.

Automated Threat Hunting Pipeline

Technologies: Python, Splunk, Threat Intelligence Enrichment

- Automated telemetry collection, IOC validation, and threat-intel enrichment, auto-ingesting prioritized findings into Splunk.
- Cut manual hunting effort 60% while improving detection speed and consistency enterprise-wide.

EDUCATION

- Chitkara University, Punjab, India — Bachelor of Engineering (B.E.), Computer Science and Engineering (Aug 2020 – Jul 2024)

CERTIFICATIONS

- CompTIA Security AI+ (Jun 2026 – Jun 2029)
- Nullcon Conference 2026, Goa
