SUMMARY

Cybersecurity Engineer in Detection Engineering at FICO. Built an enterprise Detection-as-Code framework for Sigma, SPL, KQL and YARA detections, an automated threat hunting pipeline feeding Splunk, and AI-assisted phishing and cloud alert investigation workflows. Cut emergency detection deployment effort by 50%, manual hunting effort by 60% and MTTR by 80%.

SKILLS

Threat Detection & Hunting, Incident Response, Alert Triage, MITRE ATT&CK, Sigma, SPL, KQL, YARA, Splunk, Microsoft Defender, SOAR Engineering, Security Orchestration, Workflow Automation, Torq, Cortex XSOAR, Python, REST APIs, GraphQL, Bitbucket, Jira, VirusTotal, Abnormal Security, Cloud Security, Cloud Alert Enrichment, AWS, Wiz, Datadog, AI-Powered Investigation Platforms, LLM-Based Alert Analysis, Amazon Bedrock, RAG Architectures, Amazon OpenSearch Serverless

EXPERIENCE

Cybersecurity Engineer 1 — Detection Engineering & AI Security — FICO (Jan 2026–Present)

- Architected an enterprise Detection-as-Code framework using Torq and Bitbucket, standardizing version control, testing, deployment, and rollback for Sigma, SPL, KQL, YARA, and YAML detections, cutting emergency deployment effort by 50%.
- Engineered an end-to-end automated threat hunting pipeline that enriches observables with threat intelligence, validates IOCs, and ingests prioritized findings into Splunk, reducing manual analyst effort by 60%.
- Built an AI-powered cloud security investigation platform integrating Wiz, Python, GraphQL, AWS Bedrock, and Amazon OpenSearch Serverless (RAG) for automated alert enrichment and LLM-based incident summarization, reducing MTTR by 80% and enabling 80% automated closure of low-complexity cloud alerts.

Cybersecurity Engineer Associate — FICO (Jul 2024–Dec 2025)

- Designed and deployed a production-grade, AI-assisted phishing investigation workflow in Torq combining IOC extraction, VirusTotal and Abnormal Security enrichment, and Amazon Bedrock-based assessment, achieving 75% automated phishing alert closure.
- Developed reusable Python modules and REST API integrations connecting Splunk, Microsoft Defender, Wiz, Datadog, Jira, and Abnormal Security into centralized SOAR workflows, accelerating future automation development.
- Led migration of enterprise SOAR operations from Cortex XSOAR (Demisto) to Torq, rebuilding production playbooks and integrations with minimal disruption to business-critical incident response workflows.

Cybersecurity Intern — FICO (May 2023–Jul 2024)

- Assisted in developing and tuning detection rules, validating security use cases, and documenting incident response runbooks across Splunk, Microsoft Defender, and Abnormal Security.

- Built Python utilities and API integrations for alert enrichment, email parsing, IOC extraction, and automated ticket creation within SOAR playbooks.

PROJECTS

Detection-as-Code Framework

Technologies: Torq, Bitbucket, Sigma, SPL, KQL, YARA, YAML

- Automated the full detection lifecycle — authoring, testing, deployment, and rollback — across Sigma, SPL, KQL, YARA, and YAML via CI/CD-style pipelines.
- Cut emergency deployment effort 50% and raised release governance across every detection platform.

Automated Threat Hunting Pipeline

Technologies: Python, Splunk, Threat Intelligence Enrichment

- Automated telemetry collection, IOC validation, and threat-intel enrichment, auto-ingesting prioritized findings into Splunk.
- Cut manual hunting effort 60% while improving detection speed and consistency enterprise-wide.

Automated Phishing Investigation Platform

Technologies: Torq, Amazon Bedrock, VirusTotal, Abnormal Security

- Automated header parsing, IOC extraction, reputation checks, and AI-assisted phishing verdicts with integrated risk scoring.
- Closed 75% of phishing alerts automatically, slashing manual analyst workload.

Wiz AI Alert Analyzer — AI-Powered Cloud Investigation Platform

Technologies: Python, GraphQL, AWS Bedrock, Amazon OpenSearch Serverless (RAG), Wiz

- Built a RAG-based AI investigation engine over Wiz cloud findings, automating alert enrichment and LLM-generated incident summaries.
- Cut MTTR 80% and auto-resolved 80% of low-complexity alerts, freeing analyst capacity for high-severity threats.

EDUCATION

- Chitkara University, Punjab, India — Bachelor of Engineering (B.E.), Computer Science and Engineering (Aug 2020 – Jul 2024)

CERTIFICATIONS

- CompTIA Security AI+ (Jun 2026 – Jun 2029)
- Nullcon Conference 2026, Goa
