Abnormal AI — Software Engineer 2 - Abnormal Data Platform

Dear Hiring Team,

I am applying for the Software Engineer 2 - Abnormal Data Platform role at Abnormal AI. I build backend services and data pipelines on AWS, and I want to do that work on a product at your scale.

At FICO I created a serverless Scheduled Reports module on AWS Step Functions and EventBridge Scheduler, built fault-tolerant CRON-based execution tracking with cross-microservice notifications, and designed DynamoDB aggregation pipelines for financial and usage metrics across global AWS regions. I also led our migration from pip to uv, which cut CI build times by 75%.

I am based in Bengaluru, open to in-office, hybrid or remote work and to relocation, and can join after a 30-day notice period. I would welcome the chance to talk through how I can contribute.

Sincerely,
Rhythm Sharma
