Anyscale — Software Engineer, Platform Infrastructure

Dear Hiring Team,

I am applying for the Software Engineer, Platform Infrastructure role at Anyscale. I enjoy the platform side of engineering: build tooling, infrastructure as code and reliable deployment.

At FICO I led the migration of our backend services from pip to uv with strict dependency locking, which cut CI build times by 75%. I provisioned environments with AWS CloudFormation, built a Jenkins CI/CD pipeline that saves the team over 2 hours per sprint, and built serverless job orchestration on Step Functions and EventBridge.

I am based in Bengaluru, open to in-office, hybrid or remote work and to relocation, and can join after a 30-day notice period. I would welcome the chance to talk through how I can contribute.

Sincerely,
Rhythm Sharma
