Atlassian — Software Engineer

Dear Hiring Team,

I am applying for the Software Engineer role at Atlassian. I build cloud services and internal tools that other engineers depend on, which is the kind of work Atlassian's platform is built around.

At FICO I created a serverless Scheduled Reports module on AWS Step Functions and EventBridge Scheduler, built fault-tolerant CRON-based execution tracking with cross-microservice notifications, and designed DynamoDB aggregation pipelines for financial and usage metrics across global AWS regions. I also led our migration from pip to uv, which cut CI build times by 75%.

I am based in Bengaluru, open to in-office, hybrid or remote work, and can join after a 30-day notice period. I would welcome the chance to talk through how I can contribute.

Sincerely,
Rhythm Sharma
