Cisco — Software Engineer (cloud)

Dear Hiring Team,

I am applying for the Software Engineer (cloud) role at Cisco. I build and operate cloud microservices on AWS in Java and Python, with a strong interest in build and deployment tooling.

At FICO I led the migration of our backend services from pip to uv with strict dependency locking, which cut CI build times by 75%. I provisioned environments with AWS CloudFormation, built a Jenkins CI/CD pipeline that saves the team over 2 hours per sprint, and built serverless job orchestration on Step Functions and EventBridge.

I am based in Bengaluru, open to in-office, hybrid or remote work, and can join after a 30-day notice period. I would welcome the chance to talk through how I can contribute.

Sincerely,
Rhythm Sharma
