Stripe — Software Engineer, Data & AI

Dear Hiring Team,

I am applying for the Software Engineer, Data & AI role at Stripe. I build distributed data systems for financial metrics at a financial-technology company, alongside the reporting APIs for an AI evaluation platform.

At FICO I created a serverless Scheduled Reports module on AWS Step Functions and EventBridge Scheduler, built fault-tolerant CRON-based execution tracking with cross-microservice notifications, and designed DynamoDB aggregation pipelines for financial and usage metrics across global AWS regions. I also led our migration from pip to uv, which cut CI build times by 75%.

I am based in Bengaluru, open to in-office, hybrid or remote work, and can join after a 30-day notice period. I would welcome the chance to talk through how I can contribute.

Sincerely,
Rhythm Sharma
